Memo Through: Dr. Constance Relihan
To: University Curriculum Committee
To: Core Curriculum and General Education Committee
From: Lawrence C. Wit
Subject: Core Science Sequence

This memo is intended to correct a glitch in the existing policy regarding the acceptability of a particular core science sequence. Specifically, the Concepts of Science (SCMH 1010) and General Physics (PHYS1500) should be included as an acceptable sequence. This option is an important one for students in the College of Architecture, Design, and Construction and, in fact, it was in these students’ curriculum models until our recent adoption of the new core. Somehow this sequence was never approved in the first place or somehow was left out of the recent new core offerings. In either case, it should be approved.

Please let me know if you have any questions.
